

SCOPE OF WORK

The scope of work under this contract is to provide sanitary services to the residents by building a wastewater system in order to collect domestic wastewater generated by the residential properties from the Phase I development.

Phase I will cover an area of 0.37 km², with an estimated total population of 1750 inhabitants. The estimated population for Phase II is also 1750 inhabitants. The water consumption is 120l/cap/day.

160 mm uPVC drainage pipes are already installed within the boundary wall of the houses that are completed or under construction. The rider sewers shown in the drawings (Volume 4) are indicative and the Contractor shall design the rider sewer and connection design to each property or open plot.
